

PRESS RELEASE

Air Belgium to take off with ASQS

VIENNA: September 14, 2017. Software company ASQS has sold its risk, quality and reporting modules to start-up Air Belgium that plans to begin A340-300 services between Brussels and Hong Kong this year.

Founded in 2016 and headquartered in Mont-Saint-Guibert (Brabant-Wallon), Air Belgium will offer direct flights between Belgium and Asia with a very specific, qualitative and competitive positioning and an innovative approach. Air Belgium will be operating in the coming months with a first fleet of 4 Airbus A340-300. The first route will be Brussels -

Hong Kong, followed by primary and secondary cities in Mainland China.

As a contemporary company, Air Belgium is open for new technologies and innovative solutions, making the airline a perfect partner for ASQS. The implementation of our FDM Risk Module in addition to the IQSMS standard set-up, consisting of the Quality, Risk and Reporting Modules, enables an adoption of a comprehensive safety culture, which spreads throughout the entire company right from the start.

Working with IQSMS creates an increased transparency, which systematically improves the airline's organizational communication, efficiency and quality management, precisely reflecting Air Belgium's core values.
